

Hood-Air[©]

Wear it. Use it.

Hood Air[©] is an innovative new product. To change function from bag to travel hood, unzip the two halves of the courier bag and secure with a simple popper, then inflate. You then have a comfortable sheltered place to close tired eyes – ideal for the weary traveler. Hood Air[©] is made from welded polyurethane plastic. The outer part is high visibility neoprene plastic.

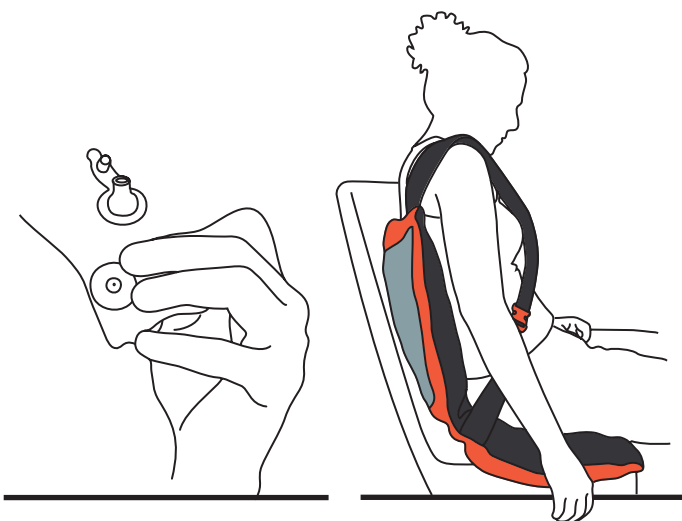

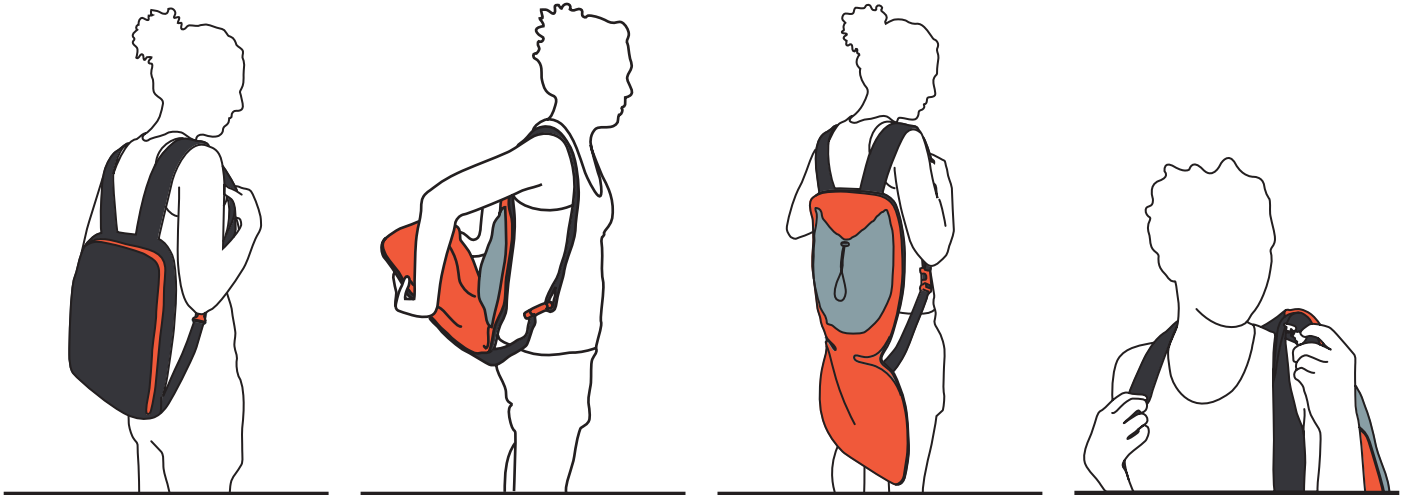

Rucksack-Air[©]

Wear it. Sit on it.

Rucksack Air[©] – sister product to Hood Air[©] shares the same innovative premise, Inflate for comfort. It is at once a fully functioning rucksack and an inflatable seat support. Blow up the seat and park yourself on it. Rucksack Air[©] is made from welded polyurethane plastic. The outer part is high visibility neoprene plastic.
